**Introduction To Dictionary**

This dictionary lists common words and phrases that can be found in Reverse Speech. It is not complete and never will be. Updated regularly, it is constantly evolving as new words are found and further research with existing entries allow definitions to be sharpened and refined. If a word is not listed, it may be a rare metaphor or possibly a Personal Metaphor that is unique to the person speaking at the time. The safest course of action in this case is to disregard the word in your analysis but keep it stored for future reference.

Terminology used in this dictionary assumes a basic understanding of Reverse Speech theory as detailed in the books, "Reverse Speech - Hidden Messages In Human Communication" and "Finding the Keys To The Garden of Eden."

**Using The Dictionary**

1. Main entries are in large, bold-faced type and are listed in alphabetical order.

2. Metaphor levels are shown in parentheses following the main entry.
   - (Structural) indicates a third level reversal, or Structural metaphor.
   - (Operational) indicates a second level reversal, or Operational metaphor.
   - (Multi) indicates a word that can appear in all three levels.

3. Definitions for Reverse Speech metaphors are generally constant. It is difficult, however, to describe in words what is primarily a picture. Each main entry, therefore, has several differing definitions that are separated in the text by semi-colons. Each definition attempts to describe one aspect of the overall picture. Some entries will be prefaced by the phrase, "meaning imprecise". In these cases the meaning of the metaphor is still obscure and the differing definitions should be used as a guide only.

4. Cross-references. Individual metaphors may be members of a larger "Metaphor Group" or associated words. Check all cross-references listed after the main entry to obtain a greater understanding of the metaphor.

5. Trance image. Each reference also describes common trance images of each metaphor. This will assist both in the understanding of the metaphor and in the monitoring of eventual trances.
Understanding Metaphors

Reverse Speech metaphors are pictorial representations of parts, structures and activities of the psyche that are below consciousness. This part of the psyche (that is separate from "the unconscious") is the prime orchestrator of human behavior. It operates, or thinks, in pictures and metaphor. In the imagery of Reverse Speech, the multi operations of human behavior are played out pictorially in a manner that is similar to the plot of movie. As the many characters, or metaphors, play their roles according to pre-programmed scripts, personality evolves and behavior is orchestrated.

Reverse Speech provides us with a running commentary, or script, of this movie. When the script (speech reversals) describe the function of each character (metaphor), it is also describing a unique aspect of personality or behavior that the metaphor represents. This aspect is described in the dictionary definitions. As each character's overall function and purpose in the movie is defined, another aspect of behavior is isolated. An accurate picture of the inner workings of the unconscious mind slowly emerges, and the structures of personality and behavior become clear.

**Coincidental Sounds**

There are some sounds in speech that will always reverse to say the same thing. These are coincidences of sound and they fall into two main categories.

(1) Those coincidental sounds that are universal. That is, whenever they occur in forward speech they will always say the same thing in reverse. A list of these sounds is given below. Whenever you hear any of these sounds do not document them, unless they are obviously part of a larger reversal. Sometimes, certainly not always, these sounds will be used as part of an overall reversal, but this is the exception rather than the rule.

(2) Some coincidental sounds are situational. In other words, they will reverse to say the same thing on one particular person only, or a particular tape only, but not on any other occasion. It is believed that there is some significance to these "situational" coincidences, but that significance has not yet been determined. The current policy is to not document them as reversals when they are found, but make a note of them at the end of your transcript.
